Zoology

Evolution

DPP: 1

Samapti Sinha Ma'am

Q1 Earth was formed _____ billion years back

- (A) 4.5 (B) 5.5
(C) 3.5 (D) 1.5

Q2 Stellar distances are measured in

- (A) km (B) m
(C) light year (D) nm

Q3 **Statement-I:** The distance of stars is measured in light years.**Statement-II:** The light we see from distant stars may have taken millions of years to reach us.

- (A) Statement I is correct but Statement II is incorrect.
(B) Statement I is incorrect but Statement II is correct.
(C) Both Statement I and Statement II are correct.
(D) Both Statement I and Statement II are incorrect.

Q4 **Statement-I:** Observing stars allows us to look back in time, as their emitted light started its journey long before it reached Earth.**Statement-II:** A light year is a unit used to measure time.

- (A) Statement I is correct but Statement II is incorrect.
(B) Statement I is incorrect but Statement II is correct.
(C) Both Statement I and Statement II are correct.
(D) Both Statement I and Statement II are incorrect.

Q5 **Statement-I:** Earth formed approximately 4.5 billion years ago within the Milky Way galaxy.**Statement-II:** Life appeared on Earth almost 500 million years after its formation.

(A) Statement I is correct but Statement II is incorrect.

(B) Statement I is incorrect but Statement II is correct.

(C) Both Statement I and Statement II are correct.

(D) Both Statement I and Statement II are incorrect.

Q6 Which of the statements does not explain the usefulness of study of the origin and evolution of life?

- (A) The human species is most evolved, so no harm can be done to us
(B) We know that life can exist anywhere else as well
(C) We learn that human beings have the responsibility to conserve nature
(D) We learn about the unity and diversity of living organisms

Q7 After about how many years of formation of earth, life appeared on this planet?

- (A) 50 million years
(B) 500 million years
(C) 50 billion years
(D) 500 billion years

Q8 A single huge explosion unimaginable in physical terms. This is related to

- (A) Stellar distances
(B) Nebular Hypothesis
(C) Big Bang theory
(D) None of the above

Q9 **Statement-I:** Galaxies are primarily made up of stars, gas, and dust.

Statement-II: The Big Bang theory describes the universe as having originated from a singular explosion.

- (A) Statement I is correct but Statement II is incorrect.
- (B) Statement I is incorrect but Statement II is correct.
- ✓ (C) Both Statement I and Statement II are correct.
- (D) Both Statement I and Statement II are incorrect.

~~Q.10~~ **Statement-I:** Stellar distances are measured in light years.

Statement-II: The big bang theory talks of a singular huge explosion unimaginable in physical terms.

- ✓ (A) Statement I and Statement II both are correct.
- (B) Statement I is correct, but Statement II is incorrect.
- (C) Statement I is incorrect, but Statement II is correct.
- (D) Statement I and Statement II both are incorrect.

Answer Key

Q1 (A)

Q2 (C)

Evolution

DPP: 2

Samapti Sinha Ma'am

Q1 Oparin and Haldane believed that life on earth originated by:

- (A) Spontaneous generation
- ✓ (B) Chemical evolution
- (C) Special creation
- (D) Extraterrestrial transfer

Q2 Statement-I: The Miller-Urey experiment simulated early Earth conditions to produce organic compounds.

Statement-II: Pasteur's work directly challenged spontaneous generation. T

- (A) Statement I is correct but Statement II is incorrect.
- (B) Statement I is incorrect but Statement II is correct.
- ✓ (C) Both Statement I and Statement II are correct.
- (D) Both Statement I and Statement II are incorrect.

Q3 Miller experiment support _____ part of theory of chemical evolution.

- ✓ (A) Evolution of simple organic compounds
- (B) Evolution of complex inorganic compounds
- (C) Evolution of simple inorganic compounds
- (D) All of the above

Q4 The primary gases that were used by Miller in his experiment were:

- ✓ (A) ammonia, methane, hydrogen and water vapour.
- (B) methane, ozone, nitrogen and water vapour.
- (C) hydrogen, nitrogen, methane and water vapour.
- (D) ammonia, methane and ozone.

The similarity of bone structure in the forelimbs of many mammals is an example of:

- (A) convergent evolution.
- (B) adaptive radiation.
- (C) analogy.
- ✓ (D) homology. hdfed

Q5 Divergent evolution gives rise to:

- ✓ (A) homologous organs.
- (B) analogous organs.
- (C) Both (A) & (B)
- (D) directional evolution.

Q6 Given figure show example of

- (A) Homologous organs
- (B) Convergent evolution
- (C) Divergent evolution
- ✓ (D) Both (A) & (C)

Q7 Analogous structures are a result of

- (A) Stabilizing selection
- (B) Divergent evolution
- ✓ (C) Convergent evolution
- (D) Shared ancestry

Q8 Statement-I: Homologous structures indicate a common ancestry among different species. T

Statement-II: Analogous structures arise from convergent evolution.

- (A) Statement I is correct but Statement II is incorrect.
(B) Statement I is incorrect but Statement II is correct.
✓ (C) Both Statement I and Statement II are correct.
(D) Both Statement I and Statement II are incorrect.

Q1

Statement-I: The eyes of Octopuses and mammals are analogous structures.

Statement-II: The heart structure of vertebrates illustrates homology.

- (A) Statement I is correct but Statement II is incorrect.
(B) Statement I is incorrect but Statement II is correct.
✓ (C) Both Statement I and Statement II are correct.
(D) Both Statement I and Statement II are incorrect.

Answer Key

Evolution

DPP: 3

Samapti Sinha Ma'am

Q1 Statement-I: According to Darwin, fitness refers to an individual's ability to survive and reproduce in a given environment. **T**

Statement-II: Natural selection always leads to the emergence of new species. **F**

- (A)** Statement I is correct but Statement II is incorrect. **T**
- (B)** Statement I is incorrect but Statement II is correct.
- (C)** Both Statement I and Statement II are correct.
- (D)** Both Statement I and Statement II are incorrect.

Q2 Statement-I: Natural selection can lead to speciation. **T**

Statement-II: Wallace independently formulated similar conclusions about evolution around the same time as Darwin. **T**

- (A)** Statement I is correct but Statement II is incorrect.
- (B)** Statement I is incorrect but Statement II is correct.
- (C)** Both Statement I and Statement II are correct. **T**
- (D)** Both Statement I and Statement II are incorrect.

Q3 Choose the **incorrect** option.

- (A)** Natural selection as a mechanism of evolution- Darwin. **T**
- (B)** Alfred wallace-worked on Galapagos Island. **T**
- (C)** Geological history of earth-correlates biological history of earth. **T**
- (D)** Origin of universe - 20 bya. **13.8**

Q4 Statement-I: Branching descent emphasizes the evolutionary relationships among species. **T**

Statement-II: Lamarck proposed that evolution occurs through the mechanisms of use and disuse of traits. **T**

- (A)** Statement I is correct but Statement II is incorrect.
- (B)** Statement I is incorrect but Statement II is correct.
- (C)** Both Statement I and Statement II are correct. **T**
- (D)** Both Statement I and Statement II are incorrect.

Q5 Statement-I: According to Lamarck, characteristics acquired during an organism's lifetime can be inherited by its offspring. **T**

Statement-II: Darwin proposed that evolution occurs through natural selection rather than use and disuse. **T**

- (A)** Statement I is correct but Statement II is incorrect.
- (B)** Statement I is incorrect but Statement II is correct.
- (C)** Both Statement I and Statement II are correct. **T**
- (D)** Both Statement I and Statement II are incorrect.

Q6 Statement-I: An example of Lamarck's theory is the idea that giraffes have long necks because their ancestors stretched their necks to reach high leaves. **T**

Statement-II: Malthus's observations contributed to Darwin's understanding of the struggle for existence. **T**

- (A)** Statement I is correct but Statement II is incorrect.
- (B)** Statement I is incorrect but Statement II is correct.

- (C) Both Statement I and Statement II are correct.
(D) Both Statement I and Statement II are incorrect.

Q7 Statement-I: Natural resources are unlimited, leading to stable population sizes. **F**

Statement-II: Malthus's observations on population dynamics helped Darwin frame his theory of natural selection. **T**

- (A) Statement I is correct but Statement II is incorrect.
(B) Statement I is incorrect but Statement II is correct.
(C) Both Statement I and Statement II are correct.
(D) Both Statement I and Statement II are incorrect.

Q8 Statement-I: Variations among individuals within a population are essential for natural selection to occur.

Statement-II: The competition for limited resources results in some individuals surviving while others do not.

- (A) Statement I is correct but Statement II is incorrect.
(B) Statement I is incorrect but Statement II is correct.
(C) Both Statement I and Statement II are correct.
(D) Both Statement I and Statement II are incorrect.

Q9 Which of the following is responsible for evolution according to Neo-Darwinism:

- (A) Mutation
(B) Natural selection
(C) Mutation and Natural selection
(D) Either A or B

Q10 Who proposed the concept of Saltation?

- (A) Darwin (B) Mendel
(C) De Vries (D) Thomas Malthus

Q11 Variation caused by mutation as proposed by Hugo de Vries are

- (A) Random and directionless
(B) Small and directional

- (C) Small and directionless
(D) Random and directional

Q12 Hugo de Vries put forth his idea of mutation by his work on

- (A) Pea plant
(B) *Drosophila*
(C) Evening primrose
(D) Maize plant

Q13 Single step mutation leading to speciation is also called

- (A) Founder effect
(B) Saltation
(C) Branching descent
(D) Natural selection

Q14 Choose the correct option regarding the concept of Darwin and Hugo de Vries

	The concept of Darwin	The concept of Hugo de Vries
(A)	Variations are random and directionless	Mutation are minor changes and directional
(B)	Gradual evolution	Saltatory evolution
(C)	Mutational concept	Genetic variation concept
(D)	Large difference arises suddenly in a population	Minor variations are heritable

- (A) (A) (B) (B)
(C) (C) (D) (D)

Q15 Match column I with column II and select the correct option from the given codes

	Column I		Column II
A.	Saltation	(i)	Darwin
B.	Formation of life was preceded by chemical evolution	(ii)	Louis Pasteur
C.	Reproductive fitness	(iii)	Hugo de Vries
D.	Life comes from pre-existing life	(iv)	Oparin and Haldane

(A) A-(iii), B-(iv), C-(i), D-(ii)

(B) A-(iv), B-(iii), C-(ii), D-(i)

(C) A-(ii), B-(iii), C-(i), D-(iv)

(D) A-(i), B-(iv), C-(iii), D-(ii)

Q16 Statement-I: Saltation refers to the concept of large, sudden evolutionary changes.

Statement-II: Hugo deVries worked on evening primrose.

(A) Statement I is correct but Statement II is incorrect.

(B) Statement I is incorrect but Statement II is correct.

(C) Both Statement I and Statement II are correct.

(D) Both Statement I and Statement II are incorrect.

Q17 Mutations are;

(A) directionless and random.

(B) random and directional.

(C) small variations and directional.

(D) not responsible for evolution.

Q18 Match the famous people with the reason suggested for the different form of life we see today.

	Column-I (Scientists)		Column-II (Theories)
A.	Lamarck	p.	Origin of life
B.	Darwin	q.	Variation
C.	De Vries	r.	Use and Disuse
D.	Oparin and Haldane	s.	Mutation

(A) A-(q); B-(p); C-(r); D-(s)

(B) A-(p); B-(q); C-(s); D-(r)

(C) A-(r); B-(q); C-(s); D-(p)

(D) A-(p); B-(p); C-(q); D-(s)

Evolution

DPP: 4

Samapti Sinha Ma'am

Q1. Divergent evolution gives rise to:

- (A) homologous organs.
- (B) analogous organs.
- (C) Both (A) & (B)
- (D) directional evolution.

Q2. The similarity of bone structure in the forelimbs of many mammals is an example of:

- (A) convergent evolution.
- (B) adaptive radiation.
- (C) analogy.
- (D) homology.

Q3. Which of the following structures is analogous to wings of butterfly?

- (A) Wing of birds
- (B) Hindlimb of rabbit
- (C) Flippers of whale
- (D) Dorsal fin of a shark

Q4. The homologous organs are those that show similarity in:

- (A) size.
- (B) origin.
- (C) function.
- (D) appearance.

Q5. Given figure show example of

- (A) Homologous organs
- (B) Convergent evolution

(C) Divergent evolution

(D) Both (A) & (C)

Q6. **Statement-I:** Homologous structures indicate a common ancestry among different species.**Statement-II:** Analogous structures arise from convergent evolution.

- (A) Statement I is correct but Statement II is incorrect.
- (B) Statement I is incorrect but Statement II is correct.
- (C) Both Statement I and Statement II are correct.
- (D) Both Statement I and Statement II are incorrect.

Q7. Which of the following options gives one **correct** example of convergent evolution and divergent evolution respectively?

- (A) Eye of *Octopus* and mammals, Bones of forelimbs of vertebrates
- (B) Thorn of *Bougainvillea* and thorn of *Cucurbita*, Flippers of penguins and dolphins
- (C) Bones of forelimbs of vertebrates, Hearts of vertebrates
- (D) Thorn of *Bougainvillea* and tendril of *Cucurbita*, Eye of *Octopus* and mammals

Q8. **Statement-I:** The rate of appearance of new species is uniform across all organisms.**Statement-II:** Adaptive abilities of organisms are inherited and have a genetic basis.

- (A) Statement I is correct but Statement II is incorrect.
- (B) Statement I is incorrect but Statement II is correct.
- (C) Both Statement I and Statement II are correct.

(D) Both Statement I and Statement II are incorrect.

Q9 Statement-I: All variants within a population have the same chance of surviving under new environmental conditions.

Statement-II: A bacterial colony can rapidly evolve due to fast reproduction.

(A) Statement I is correct but Statement II is incorrect.

(B) Statement I is incorrect but Statement II is correct.

(C) Both Statement I and Statement II are correct.

(D) Both Statement I and Statement II are incorrect.

Q10 Given below are two statements: one is labelled as Assertion A and the other is labelled as Reason R:

Assertion A: Natural selection is a mechanism of evolution.

Reason R: It implies that nature selects individuals based on their fitness to survive and reproduce.

In the light of the above statements, choose the **correct** answer from the options given below:

(A) A is true but R is false.

(B) A is false but R is true.

(C) Both A and R are true and R is the correct explanation of A.

(D) Both A and R are true and R is NOT the correct explanation of A.

Q11 Statement-I: Before industrialization, white-winged moths were more prevalent due to better camouflage.

Statement-II: Lichens are sensitive to pollution.

(A) Statement I is correct but Statement II is incorrect.

(B) Statement I is incorrect but Statement II is correct.

(C) Both Statement I and Statement II are correct.

(D) Both Statement I and Statement II are incorrect.

Q12 Statement-I: After industrialization, dark-winged moths became more common.

Statement-II: Industrial pollution led to a decrease in lichen growth on trees.

(A) Statement I is correct but Statement II is incorrect.

(B) Statement I is incorrect but Statement II is correct.

(C) Both Statement I and Statement II are correct.

(D) Both Statement I and Statement II are incorrect.

Q13 Statement-I: Industrialization had no impact on the coloration of moths in the area.

Statement-II: The use of herbicides and pesticides has accelerated the selection of resistant organisms.

(A) Statement I is correct but Statement II is incorrect.

(B) Statement I is incorrect but Statement II is correct.

(C) Both Statement I and Statement II are correct.

(D) Both Statement I and Statement II are incorrect.

Q14 Given below are two statements: one is labelled as Assertion A and the other is labelled as Reason R:

Assertion A: Microbes can evolve into new species in a matter of days.

Reason R: Their fast division rates allow them to multiply rapidly under favorable conditions.

In the light of the above statements, choose the **correct** answer from the options given below:

(A) A is true but R is false.

(B) A is false but R is true.

(C) Both A and R are true and R is the correct explanation of A.

(D) Both A and R are true and R is NOT the correct explanation of A.

Q15 Stabilizing selection favours:

(A) Both extreme forms of a trait

(B) Intermediate forms of a trait

(C) Environmental differences

(D) One extreme form over the other extreme form and over intermediate forms of a trait

Q16 Match **Column-I** with **Column-II**.

Column-I		Column-II	
A.	Disruptive	(i)	More individuals acquire value other than the mean
B.	Direction	(ii)	More individuals acquire peripheral character value
C.	Stabilizing	(iii)	More individuals acquire mean character value

Choose the **correct** option from the following:

- (A) A-(ii), B-(iii), C-(i)
 (B) A-(ii), B-(i), C-(iii)
 (C) A-(i), B-(ii), C-(iii)
 (D) A-(iii), B-(i), C-(ii)

Q17 When selection acts to eliminate both extremes from the array of phenotypes, the frequency of intermediate type, which is already more, is increased. This is called
 (A) Disruptive selection
 (B) Cyclical selection
 (C) Stabilizing selection
 (D) Non-directional selection

Q18 In this figure, which kind of selection does A, B and C represent respectively?

- (A) A: stabilizing B:Disruptive C:Directional
 (B) A: stabilizing B:Directional C:Disruptive
 (C) A: Disruptive B:Stabilizing C:Directional
 (D) A:Directional B:Disruptive C:Stabilizing

Q19 Disruptive selections usually acts to favour
 (A) Both extreme forms of a trait
 (B) Intermediate forms of a trait
 (C) Environmental differences
 (D) One extreme forms over the other extreme forms

Q20 **Statement-I:** Disruptive selection favors both extreme phenotypes.

Statement-II: Pre-existing advantageous mutations can be selected by natural selection.

- (A) Statement I is correct but Statement II is incorrect.
 (B) Statement I is incorrect but Statement II is correct.
 (C) Both Statement I and Statement II are correct.
 (D) Both Statement I and Statement II are incorrect.

Q21 Select the type of natural selection on the basis of given diagram

- (A) Stabilising
 (B) Directional
 (C) Disruptive
 (D) Artificial

Answer Key

DPP: 5

Samapti Sinha Ma'am

Q1 Statement-I: Radioactive dating can provide ages for fossils.

Statement-II: Gill slits are functional in all adults of vertebrate species.

- (A) Statement I is correct but Statement II is incorrect.
 (B) Statement I is incorrect but Statement II is correct.
 (C) Both Statement I and Statement II are correct.
 (D) Both Statement I and Statement II are incorrect.

Q2 Assertion: Fossils can also be formed from shells, exoskeleton, hairs, skin imprints, and even petrified wood.

Reason: Fossils are always remains of hard parts of life-forms found only in rocks.

- (A) Both Assertion and Reason are correct and Reason is a correct explanation of the Assertion.
 (B) Both Assertion and Reason are correct but Reason is not a correct explanation of the Assertion.
 (C) Assertion is correct but Reason is incorrect.
 (D) Assertion is incorrect but Reason is correct.

Q3 Which of the following holds true for the illustration of sedimentary rock shown below?

(A)

Fossils in strata 'Y' are older than those found in 'X'.

- (B) Fossils of more complex organisms would be present in 'X' as compared to fossils in 'Z'.
 (C) Age of fossils found in 'Z' will be less than that of fossils in strata 'Y'.
 (D) Fossils cannot be found in lowest strata, 'W'.

Q4 The paleontological evidences are obtained from:

- (A) Homologous structure
 (B) Analogous structure
 (C) Fossils
 (D) Tichens

Q5 Fossil X is older than fossil Y because:

- (A) fossil Y was found in deeper sedimentation
 (B) fossil X was found in deeper sedimentation
 (C) fossil Y has some vestigial organs functional in X
 (D) fossil Y has homologous and analogous organs of X

Q6 Match the Column.

Column-I		Column-II	
A.	Ernst Haeckel	p.	Galapagos island
B.	S.L. Miller	q.	Embryological evidences
C.	Fossils	r.	Paleontological evidence
D.	Darwin	s.	Experimental basis of chemical evolution

- (A) A-(q); B-(p); C-(r); D-(s)
 (B) A-(p); B-(q); C-(s); D-(r)
 (C) A-(r); B-(s); C-(q); D-(p)
 (D) A-(s); B-(p); C-(r); D-(q)

Q7 Embryological support for evolution was proposed by

[Re-NEET 2020]

- (A) Karl Ernst von Baer
(B) Charles Darwin
(C) Alfred Wallace
(D) Ernst Haeckel

Q8 Embryological support for evolution was disapproved by:

- (A) Alfred Wallance
(B) Charles Darwin
(C) Oparin
(D) Karl Ernst von Baer

Q9 Who stated that the embryos never pass through the adult stages of other animals

- (A) Ernst Haeckel
(B) August Weissman
(C) Karl Ernst Von Bae
(D) Georges Cuvier

Q10 Read the given statements:-

a. The embryos of all vertebrates including humans develop a row of vestigial gill slits just behind the head but it is a functional organ only in fish and not found in any other adult vertebrates.

b. In 1920 it was observed that there were more white-winged moths on trees than darkwinged moths.

c. The rate of appearance of new forms is linked to the life cycle or the life span.

Choose the correct option.

- (A) a and c are correct, b is incorrect
(B) a and b are correct, c is incorrect
(C) b and c are correct, a is incorrect
(D) All statements are correct

Q11 Examples of natural selection are:

- (A) industrial melanism.
(B) antibiotic and drug resistance.
(C) herbicides resistance.
(D) All of these

Q12 **Statement-I:** Populations with higher reproductive fitness tend to leave more offspring.

Statement-II: Natural selection can occur in response to environmental changes.

- (A) Statement I is correct but Statement II is incorrect
(B) Statement I is incorrect but Statement II is correct
(C) Both Statement I and Statement II are correct.
(D) Both Statement I and Statement II are incorrect.

Q13 Who proposed that the first form of life could have come from pre-existing non-living organic molecules?

- (A) S.L. Miller
(B) Oparin and Haldane
(C) Charles Darwin
(D) Alfred Wallace

Answer Key

DPP: 6

Samapti Sinha Ma'am

Q1 The first organisms that invaded lands were

- (A) Animals
 (B) Plants
 (C) Coelacanth
 (D) Both (B) & (C)

Q2 Which of the following is correct?

- (A) Lobe-finned fishes evolved into the first amphibians
 (B) Ichthyosaurs (fish-like marine reptiles) evolved about 200 mya
 (C) *Tyrannosaurus rex* was about 20 feet in height and had huge fearsome dagger like teeth
 (D) All of the above

Q3 Match the Column I with Column II.

	Column I		Column II
A	500 mya	(i)	Sea ferns existed
B	350 mya	(ii)	Invertebrates were formed and active
C	320 mya	(iii)	Reptiles of different shapes and sizes dominated
D	200 mya	(iv)	Jawless fishes evolved

Choose the **correct** answer from the following options:

- (A) A – (ii), B – (i), C – (iv), D – (iii)
 (B) A – (iii), B – (ii), C – (i), D – (iv)
 (C) A – (iv), B – (ii), C – (i), D – (iii)
 (D) A – (ii), B – (iv), C – (i), D – (iii)

Q4 The dinosaurs which had three horns on the head and a collared neck:

- (A) *Tyrannosaurus*
 (B) *Triceratops*
 (C) *Stegosaurus*
 (D) *Brachiosaurus*

Q5 Choose the correct sequence of evolution plants

- (A) Rhynia → Psilophyton → Progymnosperm → Seed fern
 (B) Rhynia → Psilophyton → Seed fern → Progymnosperm
 (C) Progymnosperm → Rhynia → Psilophyton → Seed fern
 (D) Progymnosperm → Psilophyton → Rhynia → seed fern

Q6 Thecodonts gave rise to:

- (A) Crocodiles
 (B) Dinosaurs
 (C) Modern birds
 (D) All of the above

Q7 Which of the following is **not** extinct?

- (A) Pelycosaur
 (B) Therapsids
 (C) Thecodont reptiles
 (D) Sphenopsids

Q8 The land reptile went back into water to evolve into fish like reptiles around:

- (A) 250 mya eg. *Ichthyosaurs*
 (B) 300 mya eg. *Therapsids*
 (C) 200 mya eg. *Ichthyosaurs*
 (D) 150 mya eg. *Therapsids*

Q9 Refer to the given figure & select the **correct** option

	P	Q	R	S
(A)	Chlorophyte Ancestors	Tracheophyte Ancestors	Rhynia type Plants	Psilophyton
(B)	Tracheophyte Ancestors	Rhynia - type Plants	Chlorophyte Ancestors	Psilophyton
(C)	Chlorophyte Ancestors	Tracheophyte Ancestors	Psilophyton	Rhynia - type Plants
(D)	Chlorophyte Ancestors	Rhynia - type Plants	Tracheophyte Ancestors	Psilophyton

(A) (A)

(B) (B)

(C) (C)

(D) (D)

Q10 Identify A, B, C and D in the figure

(A) A-Cretaceous B-Jurassic C-Permian D-Carboniferous

(B) A-Cretaceous B-Permian C-Jurassic D-Carboniferous

(C) A-Cretaceous B-Permian C-Jurassic D-Cretaceous

(D) A-Cretaceous B-Permian C-Tertiary D-Carboniferous

1 The figure shows a family tree of dinosaurs and their living modern-day counterpart organisms. Study the given two statements:

Statement I: 'A' denotes 'crocodilians' that have a four chambered heart and endothermy similar to the birds and the mammals.

Statement II: 'B' denotes 'Archaeopteryx', a connecting link between reptiles and birds and has been found as a complete specimen preserved as fossil.

(A) Statement I is correct, Statement II is incorrect

(B) Statement I is correct, Statement II is correct

(C) Statement I is incorrect, Statement II is correct

(D) Statement I is incorrect, Statement II is incorrect

Q12 Assertion (A): In 1938, a coelacanth was found in South Africa.

Reason (R): Pelycosaurids and Therapsids were synapsids.

(A) Both (A) and (R) are true and the (R) is the correct explanation of the (A)

(B) Both (A) and (R) are true but (R) is not the correct explanation of (A)

(C) Both (A) and (R) are false

(D) (A) is true but (R) is false

Q13 Correct order is

(A) Palaeozoic-Coenozoic-Mesozoic

(B) Mesozoic-Palaeozoic-Proterozoic

(C) Palaeozoic-Mesozoic-Coenozoic

(D) Mesozoic–Palaeozoic–Coenozoic

Q14 Identify the appropriate response by marking the statement(s) as **correct**.

- (a) By the time of 500 mya, invertebrates were formed and active.
- (b) Jawless fish probably evolved around 350 mya.
- (c) Sea weeds and few plants existed probably around 320 mya.
- (d) Lobefins evolved into the first amphibians that lived on both land and water.

- (A) a and b only
- (B) b and c only
- (C) a, b and c only
- (D) All of these

Q15 The original feature of Darwin's finches in Galapagos island were adapted for:

- (A) honey collecting.
- (B) insect eating.
- (C) seed eating.
- (D) fish eating.

Q16 The diverse type of beaks of Darwin's finches adapted to different feeding habits on the Galapagos islands provides evidence for origin of species by:

- (A) origin of species natural selection.
- (B) origin of species mutation.
- (C) origin of species competition.
- (D) origin of species special creation.

Q17 Placental mammals in Australia has variable forms which appears to be 'similar' to a corresponding marsupial. This is a case of

- (A) Adaptive radiation and divergent evolution
- (B) Adaptive radiation and convergent evolution
- (C) Divergent evolution
- (D) Anthropogenic evolution

Q18 The Tasmanian wolf, an Australian marsupial is similar in appearance to a placental wolf. This is due to the fact that

- (A) Marsupial and placental wolf are very closely related

(B) These showed divergent evolution

(C) They underwent similar selection pressure

(D) Marsupium and placenta are vestigial structures

Q19 Process when more than one adaptive radiation occurs in a single geological place is

- (A) Divergent evolution
- (B) Convergent evolution
- (C) Saltation
- (D) Over production

Q20 _____ marsupials were taken as examples of adaptive radiation.

Choose the **correct** option to fill the blank.

- (A) American
- (B) Australian
- (C) Indian
- (D) African

Q21 Lemur is a mammal that resembles:

- (A) Bobcat.
- (B) Numbat.
- (C) Spotted Cuscus.
- (D) Flying phalanger.

Q22 Flying squirrel and flying phalanger show

- (A) Divergent evolution
- (B) Convergent evolution
- (C) Adaptive radiation
- (D) Both (A) & (C)

Q23 Continental drift led to disappearance of a number of South American mammals because

- (A) alteration of vegetation was not conducive to their survival.

- (B) there was an outbreak of a number of infectious diseases.
- (C) sudden change in the climatic conditions.
- (D) they were outcompeted by more highly evolved animals reaching here from North America.

Q24 Read the following statements and pick the **incorrect** response.

- (A) Pouched mammals of Australia show restricted distribution.
- (B)

Due to continental drift and lack of competition from any other mammal, pouched mammals survived in Australia.

(C) The first reptiles were like shrews.

(D) Due to continental drift, when South America joined North America, South America animals were overridden by North American fauna.

Q 25 Match **List-I** with **List-II** to find out the **correct** option.

List-I		List-II	
I.	Anteater	A.	Tasmanian tiger cat
II.	Lemur	B.	Numbat
III.	Bobcat	C.	Flying phalanger
IV.	Flying squirrel	D.	Spotted cuscus

(A) I- (A), II- (D), III- (B), IV- (C)

(B) I- (B), II- (D), III- (A), IV- (C)

(C) I- (A), II- (B), III- (D), IV- (C)

(D) I- (A), II- (D), III- (C), IV- (B)

Evolution

DPP: 7

- Q1 The most accepted line of descent in human evolution is:
- (A) *Australopithecus* → *Ramapithecus* → *Homo sapiens* → *Homo habilis*
 - (B) *Homo erectus* → *Homo habilis* → *Homo sapiens*
 - (C) *Ramapithecus* → *Homo habilis* → *Homo erectus* → *Homo sapiens*
 - (D) *Australopithecus* → *Ramapithecus* → *Homo erectus* → *Homo habilis* → *Homo sapiens*

Q2 Choose the **correct** statement.

- (A) *Homo erectus* probably ate meat.
- (B) *Australopithecus* were meat eaters.
- (C) *Homo habilis* probably ate meat.
- (D) All of the above

Q3 The correct sequence of stages in evolution of modern man (*Homo sapiens sapiens*) is

- (i) *Homo erectus*
- (ii) Neanderthal man
- (iii) Modern man
- (iv) *Australopithecus*
- (v) Cro-Magnon man

- (A) (iv) → (ii) → (i) → (iii) → (v)
- (B) (iv) → (i) → (ii) → (v) → (iii)
- (C) (iv) → (ii) → (iii) → (i) → (v)
- (D) (iv) → (v) → (iii) → (i) → (ii)

Q4 Ancestor of man who first stood erect was:

- (A) *Australopithecus*.
- (B) Java ape man.
- (C) Peking man.
- (D) Cro-magnon.

Q5 The diagram (A and B) given below shows the skull of two different mammals. Which of the following accurately describes the differences between these skulls?

- (A) Skull A has less teeth than skull B
- (B) Skull A has more brain capacity than skull B
- (C) Skull A is of a human and skull B is of an ape
- (D) Skull A is of an ape and skull B is of human

Q6 Select the false statement

- (i) *Dryopithecus* was more ape like.
- (ii) *Ramapithecus* was more man like.
- (iii) *Dryopithecus* and *Ramapithecus* both were hairy and walked like gorillas and chimpanzees.
- (iv) Agriculture came around 1,00,000 years back and human settlements started.
- (A) Only (ii)
- (B) (ii) and (iii)
- (C) Only (iv)
- (D) None of the above

Q7 In *Homo habilis*, habilis refer to:

- (A) Wandering man
- (B) Modern man
- (C) Ancient man
- (D) Tool maker

Q8 **Statement-I:** *Ramapithecus* exhibited more man-like features than *Dryopithecus*.

Statement-II: Neanderthal man lived between 100,000 and 40,000 years ago.

- (A) Statement I is correct but Statement II is incorrect.
- (B) Statement I is incorrect but Statement II is correct.
- (C) Both Statement I and Statement II are correct.
- (D) Both Statement I and Statement II are incorrect.

Statement-I: Modern *Homo sapiens* developed during the Ice Age between 75,000 and 10,000 years ago.

Statement-II: Agriculture began around 5,000 years ago.

- (A) Statement I is correct but Statement II is incorrect.
 (B) Statement I is incorrect but Statement II is correct.
 (C) Both Statement I and Statement II are correct.
 (D) Both Statement I and Statement II are incorrect.

Q10 Given below are two statements: one is labelled as Assertion A and the other is labelled as Reason R:

Assertion A: *Australopithecines* were exclusively carnivorous.

Reason R: They are believed to have hunted with stone weapons.

In the light of the above statements, choose the **correct** answer from the options given below:

- (A) A is true but R is false.
 (B) A is false but R is true.
 (C) Both A and R are true and R is the correct explanation of A.
 (D) Both A and R are true and R is NOT the correct explanation of A.

Q11 The following shows the evolution of man.

- A. *Australopithecus*
 B. *Homo erectus*
 C. *Ramapithecus*
 D. *Dryopithecus*
 E. *Homo sapiens*

Choose the option with the **correct** order of evolution.

- (A) A → B → C → D → E
 (B) D → C → A → B → E
 (C) C → E → B → A → D
 (D) B → A → D → C → E

Q12 Match the hominids with their correct brain size.

A.	<i>Homo habilis</i>	800	I.	900 cc
B.	<i>Homo neanderthalensis</i>	1350	II.	1350 cc
C.	<i>Homo erectus</i>	900	III.	650-800 cc
D.	<i>Homo sapiens</i>	1350	IV.	1400 cc

(A) A-(iv), B-(iii), C-(ii), D-(i)

(B) A-(iii), B-(i), C-(iv), D-(ii)

(C) A-(ii), B-(ii), C-(i), D-(iv)

(D) A-(ii), B-(iv), C-(i), D-(iii)

Q13 Directions: In the following questions, a statement of assertion is followed by a statement of reason. Mark the correct choice as Assertion (A): *Homo erectus* essentially ate fruit. Reason (R): The fossilized jaws of *Homo erectus* suggests their fruit eating habit.

- (A) Assertion (A) is true, Reason (R) is true; Reason (R) is a correct explanation for Assertion (A).
 (B) Assertion (A) is true, Reason (R) is true; Reason (R) is not a correct explanation for Assertion (A).
 (C) Assertion (A) is true, Reason (R) is false.
 (D) Assertion (A) is false, Reason (R) is true

Q14 A Hominid fossil discovered in Java in 1891, now extinct, having cranial capacity of about 900 cc was

- (A) *Neanderthal* man
 (B) *Homo sapiens*
 (C) *Australopithecus*
 (D) *Homo erectus*

Q15 Which is the most primitive ancestor of man?

- (A) *Ramapithecus*
 (B) *Australopithecus*
 (C) *Homo habilis*
 (D) *Homo neanderthalensis*

Q16 The cranial capacity of Java Ape Man was about

- (A) 560 cc
 (B) 1000 cc
 (C) 1300 cc
 (D) 900 cc

Q17 Choose the correct matching pair from the below options

- A. *Homo habilis* – Probably do not eat meat

- B. *Homo erectus* – Highest brain capacity
- C. Cave art – Bhimbetka rock shelter in Raisen district of Madhya Pradesh
- D. Stabilising selection – more individuals acquire value other than the mean character value

- (A) A, B (B) B, D
(C) A, C (D) D, A

Q15 *Homo habilis* was the first of our ancestors to

- (A) Have a brain size equal to (or larger than ours) ours
- (B) Have a brain size equal to (or larger than ours) ours
- (C) Use tools
- (D) Have definitely diverged from the apes

Which is thought to be the first hominid to use fire?

- (A) *Homo erectus*
(B) *Homo habilis*
(C) *Australopithecus africanus*
(D) *The Neandarthals*

Q20 Who arose between 75,000-10,000 years ago, i.e., during ice age?

- (A) Modern man
(B) *Homo erectus*
(C) Neanderthal man
(D) *Ramapithecus*

Q21 Cranial capacity of Neanderthal man was

- (A) 1400 cc (B) 1500 cc
(C) 1650 cc (D) 900 cc
